

S1 Consulting—delivering effective project management and support systems to the Resources Sector.

With the ever increasing pace of development within the resources sector, there is currently more pressure than ever on companies, senior management and company directors to ensure project delivery meets customer and stakeholder requirements. This pressure creates an operating environment within the resources sector where project delivery and system implementation typically occurs under very tight delivery timeframes, with short ramp up periods, high levels of reporting requirements, multiple service or supplier interfaces to manage, and with a scarcity of skilled and experienced resources.

Project Issues

This often results in your best technical experts and suppliers becoming diverted into the day to day management of an ever increasing project load. The administrative workload of meeting project compliance issues such as field data management, project reporting, safety reporting, contract and variation management, project schedule maintenance, customer and stakeholder management, etc., dominate your technical experts' time. The Project's focus can quickly divert to one of compliance rather than the delivery of the solution for which you were originally engaged. Project timelines and deliverables become stretched, management systems and documentation are compromised, and the project loses sight of the overall aims of the business.

Our Solution

S1 Consulting can help you deliver these projects through the provision of experts and systems when you need them most. Through the delivery of **People, Processes and Technology** we can help you focus on what you do best and we can provide the systems and processes needed to support project compliance and delivery. We have extensive experience in the delivery of solutions across the resources sector. We have assisted producers, resource managers, and professional and technical service providers with the expertise, capability and resources to manage the delivery of projects and services. At S1, we understand that working with natural resources provides a dynamic operating environment and we are able to apply specific management expertise and industry experience developed in this area.

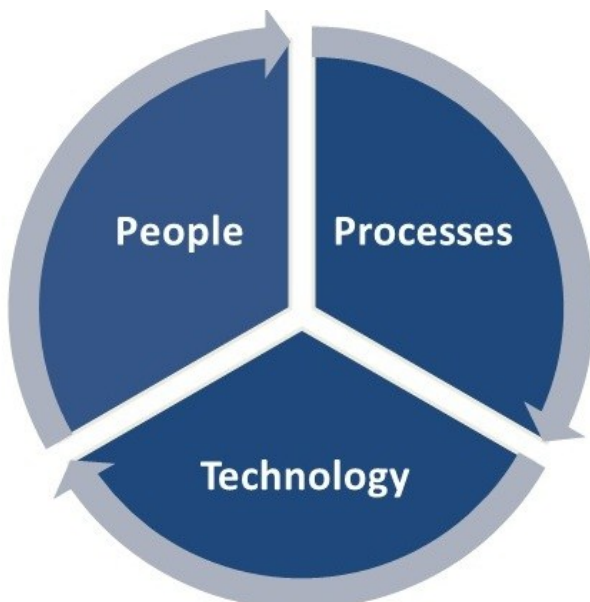

Our Services

S1 Consulting can provide delivery solutions in project, field data, procurement, customer, carbon and energy management utilising skilled **people**, improved **processes** and fit for purpose **technology**.

We specialise in provision of services to resources project developers and their suppliers who require additional expertise, capability or resources to manage the delivery and compliance of projects and services.

Specific examples of our services to the resources sector include:

- **Project Resources**
 - Project Management and Governance (including tools and capability for the management of multiple projects, staff and contractors)
 - Procurement and contract establishment, management and process improvement (including purchase and selection process methodology, scoping, selection and negotiation, and ongoing management of the supply of services)
 - Project monitoring and review during implementation (including governance, deliverables, variation management and finance)
 - Management for the delivery of technical services
 - Bid development and management for professional services suppliers (including system establishment, compliance and reporting)
- **Carbon Accounting**
 - Carbon Accounting/Management Review, specification and implementation
 - Implementation of the CARBONcontrol continuous tracking system for carbon, energy and water management, reporting and abatement planning
- **Field Data Management**
 - Field Data Management system review, specification, and implementation

“At S1 Consulting we focus on delivering successful outcomes to our clients through the provision of high quality People, Processes and Technology.

Let S1 help you focus on your core expertise by providing Project , Field Data, Customer, Carbon and Energy Management Solutions”.

Martin Halmarick, Senior Partner,
S1 Consulting & Software Services

- Tools, expertise and technology for field data management (including the development of applications for Smart Phone devices to enable knowledge capture on site and development of systems to allow management and reporting of information dynamically between field and office)
- Outsourced IT technical support

S1 Implementing practical resource sector solutions

» S1 Consulting provides and implements the CARBONcontrol end-to-end environmental compliance solution for energy, carbon and water that allows medium to large organisations to continuously track, monitor and manage all of their carbon, water and energy usage, including products, plant, facilities, fleet and travel. We can help you account for your costs and usage; establish strategies and targets for carbon emissions, energy and water reduction; track progress in real time; and present a balance sheet to demonstrate annual improvements and progress towards targets. This web-based solution provides automated data import, integration with other information and automated metering systems, and automated reporting compliant to ISO, NGRS & GHG protocols and international standards.

» S1 Consulting has provided project management expertise to Santos via Tree Crop Technologies (TCT) on a large scale irrigation project serving coal seam gas production near Roma, Queensland. Using the **S1 momentum** methodology, S1 provided the project management discipline and structure to help ensure a successful project. S1 designed a comprehensive plan to incorporate the use of world’s best practice project management techniques together with software and hardware technology to manage all staff, contractors and equipment on-site in this remote area. S1’s experienced

team of project managers, stakeholder liaison officers and industry experts assisted Santos and TCT with technology infrastructure, software design, staff infrastructure and online support. This enabled TCT's technical experts to focus on the delivery of their skills rather than be inundated with project compliance, reporting, contract management and variation issues.

Similarly, S1 has worked with a diverse range of resource sector clients to provide project and systems management expertise for the implementation of coal mine rehabilitation programs, for the completion of feasibility assessments for the development of industrial scale bio-diesel plantations, and for the implementation of innovative water management and plant species trials for coal seam gas production operations.

Our People

Keith Uebel is Managing Consultant for the S1 Resources Sector Practice. Keith has over 25 years experience in the industry, covering such diverse areas as water supply and resource management, forestry, mining exploration, operations and closure, land management, agribusiness and implementation/design of market based instruments. He also has extensive experience operating within senior executive teams, especially in stakeholder management and strategic organisational matters. He currently heads S1's business in Project Delivery, Management and Review, Operations Management and other environmental programs for the Resources Sector.

Keith's experience and knowledge in responding to emerging resources trends, risk anticipation and management, and performance improvements and efficient operations make him a very important member of our consulting team.

Martin Halmarick is a Senior Partner with S1 Consulting and has over 15 years experience in the successful management of complex projects. Martin developed S1's project management methodology and has overseen the successful delivery of over 100 projects since S1's inception. More recently Martin was responsible for the project governance and associated IT systems for the initial stages of a water re-use project for Santos. The

S1 Consulting & Software

Services is a consulting practice focused on the Resources and Education Sectors. From the first day we opened our doors in 2003, S1's aim has been to help customers build a better business by better connecting people, processes and technology. We deliver hassle free, practical business outcomes that make it easy to improve operational performance, project delivery and competitive advantage. We use plain, outcomes focused language. When we talk about systems, we talk business benefits not complex jargon.

We like to build our client relationships on trust, mutual respect and achievement. From the minute you start working with us we immerse ourselves in your project and involve you in our **momentum** process – a practical methodology for high team performance to deliver your business goals on time and on budget.

We're easy to do business with. We've learnt over the years that customers want consultants that deliver expected outcomes. If you need outcomes delivered, we are a company that you can trust - no surprises.
